Appendix Attached: X No Yes Title:

Patients that have been prescribed specific allergen solution via testing by an Allergist.

Contraindications:

- Individuals with temperature ≥38 degrees celcius or are feeling unwell.
- Individuals who developed a severe reaction lafter the last injection.
- Individuals that have missed multiple scheduled injections since last visit (for these cases contact allergist specialist for direction).

Consent:

Appendix Attached: X No Yes Title:

Patient's consent is implied for implementer to administer allergy injection if patient has presented to clinic, and is a Family Health Team patient, where interprofessional practice is expected.

Guidelines for Implementing the Order/Procedure:

Appendix Attached: _X_ No __ Yes Title:

For allergen injection for patients who meet the indications described above:

- 1. Implementer should have anaphylaxis management equipment readily available.
- 2. Implementer reviews with patient local and systemic reactions that may occur post procedure:
 - Local Reaction: redness, swelling, localized pruritis
 - Systemic Reaction: nasal congestion, hives, pruritis, dizziness, facial swelling (lips, tongue, etc.), flushing of skin, "pins and needles" sensations, difficulty speaking or swallowing, anxiety or agitation, nausea/vomiting, respiratory distress, altered consciousness

Implementer advises patient they need to remain in office 30 minutes after the injection to self-monitor for reaction. If at any time a reaction occurs they should notify someone immediately. If no reaction after 30min of self-monitoring, patient may leave office.

- 3. Allergen injection given subcutaneously to the upper arm according to allergist instructions for dose, location, and frequency.
- 4. Implementer reviews discharge Instructions with patients as follows:
 - To seek emergency medical care should a systemic reaction develop
 - To notify physician, nurse practitioner or implementer of reaction at next visit.

Allergen Storage:

- The vial and paper regimen supplied by allergist will be kept together in the suite's fridge.
- Once vial is finished, implementer will initiate ordering refill if indicated.

Documentation and Communication:

Appendix Attached: X No Yes Title:

- Documentation in the patient's eMR needs to include: name and number of the directive, name
 of the implementer (including credential).
- Information to be documented will include: allergen solution, dose, expiry date, site of injection, and details of any adverse reaction that occurs.
- The primary care provider will be alerted (verbally or electronically) as soon as possible, if an

adverse reaction occurs.

- Implementer will document in eMR and on paper regimen at each administration.
- Implementer will send a message in Practice Solutions to patient's primary care provider, notifying him/her that patient was seen, and to review note in eMR for details.
- When paper record is complete, implementer will ensure it is scanned into patient's eMR.

Review and Quality Monitoring Guidelines:

Appendix Attached:	<u>X</u>	No	 Yes
Title:			

- Routine renewal will occur annually on the anniversary of the activation date. Renewal will
 involve a collaboration between the authorizing primary care providers and the authorized
 implementers.
- At any such time that issues related to the use of this directive are identified, TCFHT must act
 upon the concerns and immediately undertake a review of the directive by the authorizing
 primary care providers and the authorized implementers.
- This medical directive can be placed on hold if routine review processes are not completed, or if
 indicated for an ad hoc review. During the hold, implementers cannot perform the procedures
 under authority of the directive and must obtain direct, patient-specific orders for the procedure
 until it is renewed.
- If new information becomes available between routine renewals, such as the publishing of new clinical practice guidelines, and particularily if this new information has implications for unexpected outcomes, the directive will be reviewed by the authorizing physician/nurse practitioner and a minimum of one implementer.
