## Order and/or Delegated Procedure:

Appendix Attached: X No Yes Title:

Assessment, diagnosis, and treatment of Group A Beta-Hemolytic Streptococcal pharyngitis (ie. Strep Throat) in adults (>15 years of age) in accordance with the conditions identified in this directive.

### **Recipient Patients:**

Appendix Attached: No X Yes

**Title:** Appendix A – Authorizer Approval Form

Recipients must:

- Be active patients of a TCFHT primary care provider who has approved this directive by signing the Authorizer Approval Form
- Be 15 years of age or older
- Meet the conditions identified in this directive

### **Authorized Implementers:**

Appendix Attached: No X Yes

Title: Appendix B – Implementer Approval Form

Implementers must be TCFHT employed Regulated Health Care Providers or Physician Assistant (under the supervision of a physician).

Implementers must complete the following preparation and sign the Implementer Approval Form:

- 1. Assess own knowledge, skill and judgement to competently assess, diagnose and treat Group A Beta-Hemolytic Streptococcal pharyngitis.
- 2. Review "Evaluation of Acute Pharyngitis in Adults" (Chow & Doron, 2020), accessible from: http://www.uptodate.com
- 3. Review "Pharyngotonsillitis, Bacterial" (Health Canada, 2017), accessible from:

https://www.canada.ca/en/indigenous-services-canada/services/first-nations-inuit-health/health-care-services/nursing/clinical-practice-guidelines-nurses-primary-care/adult-care/chapter-2-ears-nose-throat-mouth.html#a42

- 4. Review Pharyngitis chapter from "Anti-infective Guidelines for Community-Acquired Infections", most current edition (MUMS, 2019)
- 5. Review "Symptomatic treatment of acute pharyngitis in adults." (Stead, 2020), accessible from: http://www.uptodate.com
- 6. Review "Treatment and Prevention of Streptococcal Pharyngitis" (Pichichero, 2020), accessible from: <a href="http://www.uptodate.com">http://www.uptodate.com</a>
- 7. Review "Pharyngitis: approach to diagnosis and treatment" (Sykes et al. 2020). Available at: <a href="https://www.cfp.ca/content/66/4/251?rss=1">https://www.cfp.ca/content/66/4/251?rss=1</a> and "Point of care testing for group A streptococcal pharyngititis" (Craig et al. 2020) available at: <a href="https://www.cfp.ca/content/66/1/41">https://www.cfp.ca/content/66/1/41</a>
- 8. Review Choosing Wisely materials "Using antibiotics wisely in primary care" (2020). Available at: https://choosingwiselycanada.org/campaign/antibiotics-primary-care
- Review guidelines for collecting a throat swab specimen, accessible from: <a href="https://www.dynacare.ca/specialpages/secondarynav/find-a-test/nat/throat%C2%A0culture.aspx?sr=ont&st=throat&">https://www.dynacare.ca/specialpages/secondarynav/find-a-test/nat/throat%C2%A0culture.aspx?sr=ont&st=throat&</a> and <a href="https://tests.lifelabs.com/Microbiology/MICRO-THROAT">https://tests.lifelabs.com/Microbiology/MICRO-THROAT</a> C S.aspx?s=1
- 10. Review and become familiar with antibiotics recommended for treatment (in MUMS Anti-Infective Guidelines) using a pharmacology reference text and/or CPS.
- 11. An authorizing primary care provider must supervise 3 cases.

| Indications: | Appendix Attached: X No Yes |
|--------------|-----------------------------|
|              | Title:                      |

- Eligible patients who present with abrupt onset of sore throat in addition to 1 or more of the following symptoms: fever, tender anterior cervical lymphadenopathy, tonsillopharyngeal and/or uvular edema, patchy tonsillar exudate, palatal petechiae and/or scarlatiniform rash.
- Eligible patient has a positive Rapid Antigen Detection Test for GABHS infection

### **Contraindications:**

- No verbal consent from patient/substitute decision maker for implementer to apply directive.
- Patient is <15 years of age
- Recurrent GAS pharyngitis
- Patient history of acute rheumatic fever or rheumatic heart disease

| Consent: | Appendix Attached: X No Yes |
|----------|-----------------------------|
|          | Title:                      |

- Patient's consent is implied for implementer to assess and treat GABHS pharyngitis, as patient
  has presented seeking treatment and is a Family Health Team patient, where interprofessional
  practice is expected.
- Patient informed of purpose of testing, including when results will be available, and follow up required if test is positive or negative
- Patient able to give informed consent, is cooperative, and does not need restraint

| Order/Procedure: | <b>Title:</b> Appendix C – Order Treatment Table for GAS |  |
|------------------|--|--|
|                  | Pharyngitis in Adults >15 years                          |  |

For assessment and treatment of patients who meet the Indications described above:

- Implementer performs assessment including:
  - History (presenting symptoms, past history of GABHS pharyngitis and treatment, allergies, recent GABHS contacts)
  - Physical assessment (temperature, head and neck examination, chest (if warranted))
- Implementer utilizes the following **Clinical Decision Rule for Management of Sore Throat** (Antiinfective Review Panel, 2019) to calculate throat score and determine appropriate course of action as per total throat score:

### **Clinical Decision Rule for Management of Sore Throat**

Step 1 – Centor criteria

| Criteria                                | Points |
|---|--------|
| Temperature > 38 C                      | 1      |
| Absence of Cough                        | 1      |
| Swollen, tender anterior cervical nodes | 1      |
| Tonsillar swelling or exudate           | 1      |
| Age 15-44                               | 0      |
| Age ≥ 45                                | -1     |

### Step 2

### Choose the appropriate management according to the sore throat score:

| Total<br>Score | Risk of GABHS<br>Infection (%) | Suggested Management   |
|----------------|--------------------------------|--|
| 0 or less      | 1-2.5                          | No culture or antibiotic required*   |
| 1              | 5-10                           |  |
| 2              | 11-17                          | Perform culture or Rapid Antigen Test  |
| 3              | 28-35                          | Treat with antibiotic only if test is positive for GABHS   |
| 4 or<br>more   | 51-53                          | Start antibiotic therapy on clinical grounds (patient has high fever or is clinically unwell and presents early in the disease course). If culture or Rapid antigen test is performed and result is negative then antibiotic should be discontinued. |

<sup>\*</sup>It is always appropriate to perform a throat culture if other clinical factors lead you to suspect Strep infection (eg., household contact).

- Implementer performs point-of-care Rapid Antigen Test, if suggested according to the above Clinical Decision Tool
- If the Rapid Strep Test is positive, implementer communicates with patient that he/she likely has GAS pharyngitis.
  - The implementer will advise the patient/substitute decision maker to treat Pharyngitis

according to the attached Order Treatment Table (Appendix D).

- o Implementer assesses the patient for allergies and documents in the EMR.
- o Implementer confirms medication profile is accurate and checks for drug interactions.
- The implementer will prepare a Prescription using the supervising primary care provider initials in Practice Solutions. Prescription should be signed as below:
  - Signature
  - Implementer Name/Primary Care Provider (Medical Directive # TCFHT-MD13)
- Implementer provides patient with education of common side effects of antibiotics prescribed, when to expect resolution of symptoms, and when to seek further medical assistance.
- If the Rapid Strep Test is negative, implementer performs a throat culture if other clinical factors lead implementer to suspect streptococcal infection (ex. confirmed contact, high fever) and in adults who are at higher risk for severe complications (eg., poorly controlled diabetes mellitus, immunocompromised, or on chronic steroids), or young adults living in high risk settings such as college dormitories/congregate settings
  - Implementer will prepare lab requisition for throat swab culture and sensitivity using the supervising primary care provider initials in Practice Solutions. Lab requisition should be signed as below:
    - Signature
    - Implementer Name/Primary Care Provider Name (Medical Directive # TCFHT-MD13)
  - o Implementer to consult with primary care provider to determine alternative etiology, diagnosis, and treatment if Rapid Strep Test and/or throat swab for culture and sensitivity are negative for GAS pharyngitis (ex. viral upper respiratory tract infection, infectious mononucleosis, gonorrhea, acute HIV infection).
- Implementer documents the encounter in the EMR, using TCFHT-MD13 stamp.
- The implementer will review with the patient/substitute decision maker interventions for symptom management (ex. rest, hydration, saline gargles, warm tea, ice, lozenges/spray, honey, over-the- counter antipyretics and analgesics, such as ibuprofen or acetaminophen, avoid smoke, air humidifier).
- Implementer will educate the patient with cough and no fever in addition to their sore throat to stay home and to monitor themselves. They should be cautioned to present for evaluation if fever develops, if they have difficulty swallowing or if they develop any of the following unusually severe symptoms: secretions, drooling, respiratory distress, stridor, "tripod" position, dysphonia, muffled "hot potato" voice, neck swelling, or lockjaw, stiff neck, crepitus.
- The implementer advises the patient/substitute decision maker that if symptoms do not improve within 48 hours of starting antibiotic treatment, they should see their primary care provider.
- Implementer will follow up with lab results promptly (if applicable) and review with the patient's primary care provider.

| Documentation and Communication: | Appendix Attached: No _X _ Yes                           |  |
|----------------------------------|--|--|
|                                  | Title: Appendix D – TCFHT-MD13 Stamp; Appendix E –       |  |
|                                  | Sample Lab Requisition; Appendix F – Sample Prescription |  |

 Documentation in the patient's EMR needs to include: name and number of directive, name of implementer (including credentials), and name of patient's physician/nurse practitioner who has authorized directive.

- Information regarding implementation of the procedure and the patient's response should be documented in the patient's EMR, in accordance with standard documentation practice (CNO, 2008; Potter & Perry, 2006).
- Standard documentation is recommended for prescriptions, requisitions, and requests for consultation.
- RN will send a message in Practice Solutions to patient's primary care provider, notifying him/her that patient was seen and to review note in EMR.

| Review and Quality Monitoring Guidelines: | Appendix Attached: X No Yes |
|---|-----------------------------|
|   | Title:                      |

- Review will occur annually on the anniversary of the activation date. Review will involve a collaboration between the authorizing primary care providers and the approved implementers.
- If new information becomes available between routine reviews, such as the publishing of new clinical practice guidelines, and particularily if this new information has implications for unexpected outcomes, the directive will be reviewed by an authorizing primary care provider and a mimimum of one implementer.
- At any such time that issues related to the use of this directive are identified, TCFHT must act
  upon the concerns and immediately undertake a review of the directive by the authorizing
  primary care providers and the authorized implementers.
- This medical directive can be placed on hold if routine review processes are not completed, or if
  indicated for an ad hoc review. During the hold, implementers cannot perform the procedures
  under authority of the directive and must obtain direct, patient-specific orders for the procedure
  until it is renewed.

### **Appendix C**

## Order Treatment Table for GABHS Pharyngitis in Adults >15 years

The primary purpose of treatment is to prevent acute rheumatic fever. Based on available evidence, and unless otherwise stated, regimens require 10 days in order to achieve successful treatment and prevent post-streptococcal sequelae.

| Adults | Viral 80-90% of the time Pharyngitis is NOT bacterial | NO Antibiotic<br>treatment indicated | Viral features include: Conjunctivitis, cough, hoarseness, coryza, anterior stomatitis, discrete ulcerative lesions |
|--------|---|--------------------------------------|---|
